PERSONAL PROJECTS

Customer Management System

- Customer Management System The project is built using the ASP.NET Model-View-Controller (MVC) architecture, which separates the application's concerns into three main components: the model, which represents the data and business logic; the view, which represents the user interface; and the controller, which handles user input and manages communication between the model and view. The Entity Framework is used to interact with the customer's database. This makes it easier to perform CRUD operations on the database without writing SQL queries directly
- **TECHNOLOGIES: ASP.NET MVC**

Customer Management System

- The Customer Management System is a sophisticated software application developed using ASP.NET Core Web API technology. It serves as a powerful tool for effectively handling various aspects of customer-related data and interactions. ASP.NET Core Web API is a modern framework designed to create robust and efficient web APIs, making it an ideal choice for building the backend infrastructure of this system. The primary purpose of this system is to streamline the management of customer-related information, such as personal details, purchase history, and communication interactions. ASP.NET Core Web API provides the underlying structure that enables seamless communication between different parts of the system, making it possible to securely retrieve, create, update, and delete customer data through well-defined API endpoints.
- **TECHNOLOGIES: ASP.NET Core Web API**

Online Child Vaccination Tracker (01/2023 - 03/2023)

- Nowadays, there is no such online system available to store the vaccination records of children, we have to store the information in physical format and there are chances of misplacing the document as they are in physical format. So we have to maintain the storage information of those documents for future use or reference. This document communicates the system requirements and scope for developing Online Child Vaccination Tracker. The scope of this document is to define the functional and non functional requirements, business rules and other constraints requirements
- **TECHNOLOGIES: HTML,CSS,REACT,SPRING BOOT,MY SQL,HIBERNATE**
